

## About

I'm a full-stack developer who devours frameworks for breakfast and dreams of fast and hassle-free deployment platforms. I'm fluent in JavaScript and specialized in Node.js stacks, but my expertise extends beyond that. With a diverse range of experiences under my belt, I'm a versatile tool in any project.

I'm always eager to learn new things, and I'm enthusiastic about the prospect of working with you. Could your organization be the next exciting addition to my resume?

## Work Experience

- |             |  |
|-------------|--|
| 2023 — Now  | <p>Freelance developer at Your company</p> <p>I'm taking a significant step forward in my career, ready to leverage all my experiences and expertise to contribute to your mission</p>   |
| 2022 — 2022 | <p>Lead developer at Apini / Sodexo</p> <p>My work revolved around the central authentication system, where every Sodexo app interfaces with our authentication application, constructed using the OIDC system and powered by Next.js</p>  |
| 2022 — 2022 | <p>Lead developer at Apini / Manitou<br/>Rennes (France)</p> <p>In my role as an Angular specialist and full-stack developer, I focused on maintaining and evolving a central hub for Manitou's internal documentation. This hub caters to both concessionaire and corporate employees, providing a user-friendly interface that allows seamless viewing, updating, and editing of documents. Additionally, it functions as a robust download manager.</p> |
| 2021 — 2021 | <p>Lead Developer at Needone / Maugin<br/>Rennes (France)</p> <p>I was in the process of creating a specialized app tailored for Maugin's depot workers. This app was intended to be a versatile tool, streamlining digital tracking across a range of tasks, including order handling, inventory tracking, and preparation processes. It was designed to operate on Android devices equipped with a laser scan extension.</p>                             |
| 2021 — 2021 | <p>Fullstack Developer at Needone / Groupy Market<br/>Rennes (France)</p> <p>I had an exciting mission, where I had to build a marketplace from the ground up. I worked with a lean team, and our stack included Angular and NestJS. Throughout the project, I was involved in everything from database design to continuous integration, including testing and, of course, development.</p>   |

2020 — 2020

Fullstack developer at Apside / DDS Supply Chain  
Rennes (France)

Diving into various applications that had been around for a while. It was a bit of a puzzle since these apps were showing their age.

While maintaining them, we were also giving these old software solutions a makeover and turning them into a single, modern API. I brought all my experience and knowledge, acquired some along the way, making it a pretty exciting journey.

2018 — 2019

Fullstack Developer at Apside / RCI Bank  
Rennes (France)

Developing innovative solutions for Renault banking, a widely used credit system dedicated to the car industry. Creating a micro-services architecture from a legacy WCF "service cluster" and implementing frontends for different applications with Angular.
